

TCB Price Agent — Setup & Usage Guide

What this does

Every day at a scheduled time, this agent:

1. Opens `https://tcb.gov.bd/pages/daily-rmps`
 2. Finds and downloads the latest Excel price report
 3. Parses all items (rice, oil, fish, chicken, spices, etc.)
 4. Saves them to a local SQLite database (`prices.db`)
-

Setup

Step 1 — Install dependencies

Open your terminal and run:

```
pip install requests beautifulsoup4 pandas openpyxl
```

Step 2 — Test it manually

Navigate to the folder where you saved the scripts, then:

```
python tcb_agent.py
```

You should see a table of today's prices printed to screen and `prices.db` created.

Step 3 — Schedule daily on Windows

Option A: Windows Task Scheduler (recommended)

1. Open **Task Scheduler** (search it in Start Menu)
2. Click **Create Basic Task**
3. Name: `TCB Price Agent`
4. Trigger: **Daily at 12:45 PM** (TCB publishes by 12:30)
5. Action: **Start a program**
 - Program: `python`
 - Arguments: `tcb_agent.py`
 - Start in: `C:\path\to\your\tcb_price_agent\` ← your folder
6. Finish

Option B: Quick PowerShell setup (copy-paste this)

Open PowerShell as Administrator and run:

```
powershell
```

```
$action = New-ScheduledTaskAction -Execute "python" -Argument "tcb_agent.py" -
$trigger = New-ScheduledTaskTrigger -Daily -At "12:45PM"
Register-ScheduledTask -TaskName "TCB Price Agent" -Action $action -Trigger $tr
```

Replace `C:\path\to\tcb_price_agent` with your actual path.

Querying prices

```
bash

# See today's prices (or latest available)
python query_prices.py

# See prices for a specific date
python query_prices.py --date 2026-06-08

# Search for a specific item
python query_prices.py --item oil
python query_prices.py --item chicken
python query_prices.py --item rice

# Export to CSV
python query_prices.py --export

# List all dates in your database
python query_prices.py --dates
```

Database location

`prices.db` in the same folder as the scripts. You can open it with [DB Browser for SQLite](#) (free GUI tool).

Downloaded Excel files

Saved in the `downloads/` subfolder, named like `tcb_2026-06-08.xlsx`.

Output format

date	item_bn	item_en	unit	price_min	price_max	source
2026-06-08	সয়াবিন তেল (লুজ)	Soybean Oil (Loose)	প্রতি লিটার	185	195	TCB / Dhaka Mahanagari
2026-06-08	মুরগী(ব্রয়লার)	Broiler Chicken	প্রতি কেজি	160	200	TCB / Dhaka Mahanagari

Logs

Check `agent.log` to see run history, errors, and how many items were saved each day.

Next steps (optional upgrades)

- Add Chaldal scraper and compare retail vs TCB prices
- Build a Streamlit dashboard to visualize trends
- Add a Telegram/email alert if a price jumps more than 10% overnight
